

# Westminster

**Unitary Authority** 

This profile was produced on 12 August 2014

# **Health Profile 2014**

### Health in summary

The health of people in Westminster is varied compared with the England average. Deprivation is higher than average and about 35.4% (10,900) children live in poverty. Life expectancy for both men and women is higher than the England average.

#### Living longer

Life expectancy is 12.2 years lower for men and 8.1 years lower for women in the most deprived areas of Westminster than in the least deprived areas.

#### Child health

In Year 6, 25.3% (334) of children are classified as obese, worse than the average for England. The rate of alcohol-specific hospital stays among those under 18 was 29.4\*, better than the average for England. This represents 11 stays per year. Levels of GCSE attainment, breastfeeding and smoking at time of delivery are better than the England average.

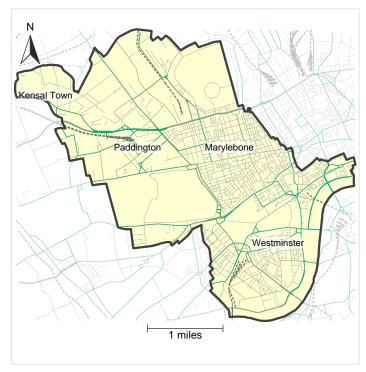

#### Adult health

In 2012, 17.9% of adults are classified as obese, better than the average for England. The rate of alcohol related harm hospital stays was 552\*, better than the average for England. This represents 1,023 stays per year. The rate of self-harm hospital stays was 73.2\*, better than the average for England. This represents 166 stays per year. The rate of smoking related deaths was 247\*, better than the average for England. This represents 198 deaths per year. Estimated levels of adult excess weight are better than the England average. Rates of sexually transmitted infections, people killed and seriously injured on roads and TB are worse than average. The rate of hip fractures is better than average.

### Deprivation: a national view

The map shows differences in deprivation levels in this area based on national quintiles (fifths) of the Index of Multiple Deprivation 2010 by Lower Super Output Area. The darkest coloured areas are some of the most deprived areas in England.

Lines represent electoral wards (2013) © Crown Copyright and database rights 2014, Ordnance Survey 100016969

This chart shows the percentage of the population in England and this area who live in each of these quintiles.

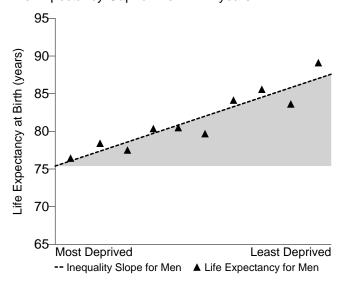

## Life Expectancy: inequalities in this local authority

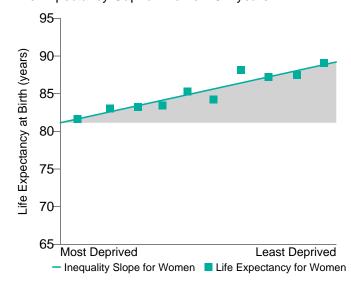

The charts below show life expectancy for men and women in this local authority for 2010-2012. Each chart is divided into deciles (tenths) by deprivation, from the most deprived decile on the left of the chart to the least deprived decile on the right. The steepness of the slope represents the inequality in life expectancy that is related to deprivation in this local area. If there were no inequality in life expectancy as a result of deprivation, the line would be horizontal.

Life Expectancy Gap for Men: 12.2 years

most deprived quintile

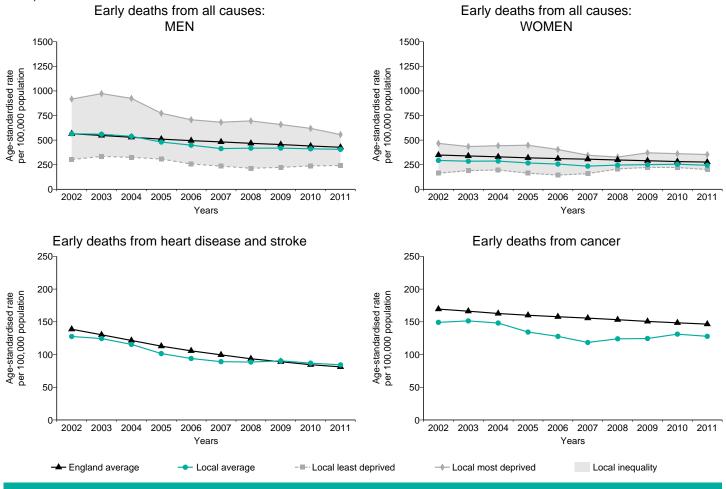

Life Expectancy Gap for Women: 8.1 years

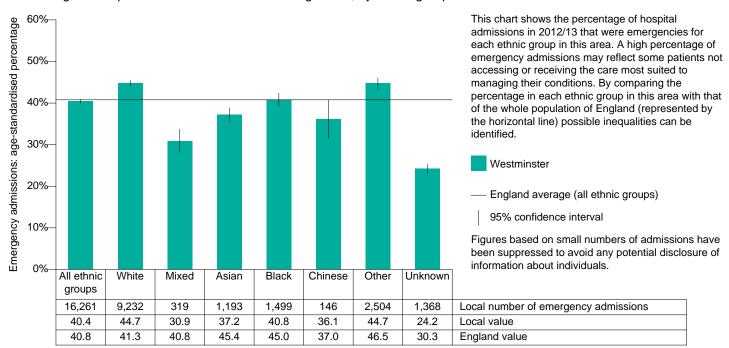

### Health inequalities: changes over time

These charts provide a comparison of the changes in early death rates (in people under 75) between this area and all of England. Early deaths from all causes also show the differences between the most and least deprived quintile in this area. (Data points are the midpoints of 3 year averages of annual rates, for example 2005 represents the period 2004 to 2006).

### Health inequalities: ethnicity

Percentage of hospital admissions that were emergencies, by ethnic group

### Health Summary for Westminster

The chart below shows how the health of people in this area compares with the rest of England. This area's result for each indicator is shown as a circle. The average rate for England is shown by the black line, which is always at the centre of the chart. The range of results for all local areas in England is shown as a grey bar. A red circle means that this area is significantly worse than England for that indicator; however, a green circle may still indicate an important public health problem.
